

FOR IMMEDIATE RELEASE

Streaming video tool for teachers, parents and students to watch new learning strategies and tools, CloudGear Learning *Press release*

Toronto, ON, March 27, 2020 — LEARNstyle Ltd, in light of COVID-19 and its challenges within the education sector, is extremely pleased to provide **free access** to our new *streaming, cloud-based, easy-to-use tool known as CloudGear Learning*, cloudgearlearning.com

How is this important to you? Education technology is the core “gear” to driving forward the new reality of education due to COIV-19. However, the opportunities for a student to self direct their learning and develop new strategies are mitigated by not having an easy method to establish, explain and direct with their own current and instructional strategies. What if teachers, parents and students were able to remove the onerous task by empowering learning? Leading with pedagogy and following with technology is an approach to help all involved in the new virtual education structure to understand how to use Education technology, such as Read&Write for Google Chrome and Google Apps for Education.

[CloudGear Learning](http://cloudgearlearning.com) introduces a framework that looks at six ‘functional focus’ areas: Writing, Organization, Research, Comprehension, Idea Generation, Study and Test Skills. This approach utilizes self-directed instructional videos and tech-torials to provide students, teachers and parents with new “gears” to enhance student’s learning and improve outcomes.

At LEARNstyle, we know that everyone learns differently and that instruction needs to be customized for each individual to be successful. This customization presents the ongoing challenge of identifying learning styles in order to use this information in decision making that best supports each student’s learning strengths and needs. This resource is an indispensable tool in this new learning reality for teachers, parents and students throughout Ontario and Canada--and will become embedded in the daily flow of information throughout education.

“[CloudGear Learning](http://cloudgearlearning.com) introduces a video-based tool that will aid teachers, parents and student by providing evidence-based strategies to help with so many learning skills,” says DJ Cunningham, CEO of LEARNstyle.

LEARNstyle is a cutting-edge education and assistive technology company based out of Toronto ON.
